

Continuum Fortify For Network Security

PRODUCT DETAILS

Continuum Fortify For Network Security is the ideal solution for SMBs that need to get a deeper view of network based activities and meet compliance requirements.

With cyber attacks becoming more prevalent, businesses of all sizes need visibility across their entire network to spot malicious activities. Through automated correlation and a unified experience, MSPs are able to keep a step ahead of the attackers on their clients network as well as their own.

Continuum provides advanced SIEM services with real-time alerting, importing of log records and activity monitoring, where by MSPs can easily demonstrate compliance with 3 regulatory standards including HIPAA, PCI and NIST-800, all while keeping your clients safe.

With Continuum Fortify For Network Security you have the right solution for SMBs that need to meet any security compliance requirements. Collect and analyze information from network devices, manage device logs, process alerts and keep log retention to assure your client is covered for regulatory requests.

Sure. Regulations and audits can be complicated. But we're here to help!

TYNESO

ENGAGING WORKPLACES

“Continuum helped us develop a better security business than we could have built ourselves. Instead of having to assemble our own offering, everything we need is in the portal. That means Continuum partners can go to market tomorrow instead of six months from now.”

Steve Tygat
Founder, Tyneso, Benelux

Key benefits

Advanced security operations

Cyber criminals target MSPs and SMBs the same as big enterprise firms by leveraging the same tactics. Continuum provides a managed detection and response service that scales protection with you enabling deeper focus on growing your business while Continuum provides the staff to drive remediation of threats as they surface.

Unified partner experience

Single, unified platform experience across the environment provides streamlined and reduced management costs and is integrated with common MSPs tools and processes (ticketing systems, etc.). Includes comprehensive client value reports

Be compliance ready

Out of the box support for PCI, HIPAA and NIST-800 compliance reports that inform where customers stand against industry regulations.

Continuum Fortify For Network Security

How we do it better

Delivering smarter, faster insights

Automated event correlation

Unified dashboards for all security tools

Log monitoring and management

Reporting for compliance requirements

SOC expertise and assistance

Key features

Automated Correlation

Security events across tools provides faster identification of issues through more comprehensive understanding of each threat including increased ability to discover advanced attacks

Reduce false positives

More accurate event diagnosis not only reduces event fatigue but lowers the costs of partners to manage incidents.

Monitoring and analysis

Monitor key log files to identify and correlate events that could be malicious, while providing additional security and adherence to regulatory guidelines. *Please check with your account manager or sales representative for the list of supported devices.*

Advanced reporting for compliance

Generate daily reports and threat analysis outlines for three regulatory standards: HIPAA, PCI and NIST-800.

Threat intelligence support

The Continuum Fortify SOC works together with you to identify threats on servers and firewalls and support compliance guidelines through a fully integrated range of response capabilities, keeping client environments and data safe and available 24x7.

Ultimate SIEM Technology

Continuum Fortify for Network Security provides a SIEM platform combining innovative automation technology with optimized dashboard visuals that accelerates incident response and remediation. Coupled with our global SOC to deliver the best solution for SMBs that need to meet compliance requirements, audit reporting and visibility into customer environments is a breeze.
