

Continuum Fortify

Cybersecurity

Continuum Fortify is the advanced cyber security solution you need to deliver the protection your clients demand

Understand environmental risks, improve your security conversation with clients, benefit from automated threat detection and rely on our managed detection and response capability with the Continuum global SOC 24x7. No matter what you need, we have the right protection to meet your security strategy and provide an unified and accelerated response.

Identify risks

Generate end client analysis that provide the data insights and guidance to identify and resolve security vulnerabilities.

Scalable protection

From foundational to advanced cyber security products—we have the protection you need to meet each unique client's need.

Always-on watch

Automated identification and processing of threats provide persistent monitoring and protection.

Managed detection and response

Leave the analysis to the Continuum security experts to respond quickly to an incident, mitigating the threat and restoring environments.

TYNESO

ENGAGING WORKPLACES

“Continuum helped us develop a better security business than we could have built ourselves. Instead of having to assemble our own offering, everything we need is in the portal. That means Continuum partners can go to market tomorrow instead of six months from now.”

Steve Tygat
Founder, Tyneso, Benelux

How it works

Operational Flexibility. Unified and managed security products provided by Continuum enables Fortify to be utilized by partners across the security capability spectrum to help them deliver on their clients security goals.

Customizable profiles and risk scoring expose endpoint and user account security gaps, helping you identify what reconfiguration is needed to prevent threats and allows you to define alert thresholds for when an environment exceeds an acceptable level of vulnerability.

Persistent threat monitoring and prevention that identifies the root causes of the threats, reversing the malicious attempts in the early stages, preventing incidents to penetrate your systems.

Security Operations Center (SOC) with managed detection and response removes the burden from your technical team by continuously watching the environments and acting rapidly to potential risks, ensuring ongoing protection with the most current security insights and guidance available.

Compliance support with server and account configuration reporting, coupled with SIEM log monitoring and management, provides the right security measures to meet regulatory requirements (e.g. HIPAA).

Continuum Fortify

Cybersecurity

Why choose Fortify

Turnkey protection of MSP

Proactive, outcome-orientated security

Quickly identifies security gaps

Delivers daily threat alerts

Supported by 24 x 7 SOC

Try-before-you-buy access

Materials to help you sell

Products

Fortify for the MSP

Securing your clients starts at home. Protect your entire MSP infrastructure with the Fortify solution suite. Turnkey and fully managed set of protections for MSPs to defend their own environment. Includes assessment reporting.

Fortify for Assessment/Assessment Plus

Materials and tools you need to build and support your security practice. From end client-facing reports to incident-response support and discounted products, we have the foundation to strengthen the delivery of your cyber security services.

Fortify for Protection

Get visibility into your client's vulnerabilities and determine the right procedures to overcome them. Continuum Fortify for Protection scans SMB environments, identifies security gaps and provides information to help you establish the most efficient security strategy.

Fortify for Endpoint Security

Continuum Fortify for Endpoint Security is a complete solution that detects, mitigates and remediates threats, all with the support of an experienced 24x7 SOC service.

Fortify for Network Security

If you work with regulated clients, Fortify for Network Security is a flexible, scalable solution that helps you meet requirements. Collect and analyze information from network devices, manage endpoint logs, create alerts and keep log retention to assure your client is 100% covered.
