Keeping Email Safe

Email Encryption

Find the right choice for your company

Our SaaS Email Encryption Suite offers three comprehensive enterprise-standard encryption services, allowing a company to choose the service best fits their organization.

PDF Encrypted Email

With this service, customers send emails which are then converted into encrypted PDF files. The encryption is triggered by a keyword in the subject line. Once the email is sent, the document is passed through TEL Secure Encryption Gateway where it is converted into an encrypted PDF document. Your email can also contain attachments embedded in the encrypted PDF. Once the recipient receives the encrypted PDF, the sender is notified and sent a randomly generated password that can be delivered to the recipient by whatever method the sender prefers, such as SMS or WhatsApp.

Email Encryption

Secure Portal Encryption

With Secure Portal encryption, a link is sent to the recipient's email address directing them to The Email Laundry Secure Portal. When the recipient enters the secure portal, they are asked to enter a username and password, once they do so, they can then access the encrypted email.

Sender | Recipient | Mail Server

TLS Encryption

Transport Layer Security encryption encrypts the communication channel when an email is being sent. **Opportunistic TLS** is The Email Laundry's default option, allowing senders to automatically encrypt connections, but with **Enforced TLS**, customers can name specific sender domains that require encryption. If an email from a set domain is not encrypted, delivery is delayed until a secure connection is found.
